

RUBBER CRUMB (F, M, C) LOST CIRCULATION MATERIAL

RUBBER CRUMB is a lost circulation material (LCM) made up of vulcanized rubber ground available in 3 sizes: Fine, Medium and Coarse.

FEATURES AND BENEFITS:

- Used as a seepage loss, LCM and bridging agent for all drilling fluid systems.
- Chemically-inert.
- May be added to any water- or oil-based fluid.
- Will deform under pressure and can be squeezed into fractures or voids: will then return to its original shape and size.
- This physical feature enables it to provide an effective and lasting seal.

RECOMMENDED TREATMENT: 20-80 kg/m³ (typically)

PHYSICAL PROPERTIES:

Appearance:	Black granules; mild rubber odour
Specific Gravity:	0.95 – 1.40
Solubility:	Insoluble (water)

MIXING/HANDLING:

Mix into the mud or LCM pill. Refer to the SDS for specific precautions and handling requirements.

MICROTOX® THRESHOLD: TBD

PACKAGING: 25 kg bag / 40 bags/pallet
