

ULTRA SEAL LOST CIRCULATION MATERIAL

ULTRA SEAL is a proprietary blend of cellulosic fibre groups, filtration control agents and physical lubricants, used to control a variety of lost circulation types in drilling fluids. ULTRA SEAL is available in four grades.

- ULTRA SEAL XP and ULTRA SEAL TG are fine grade materials used as a seepage loss
 preventative as well as promoting anti-friction. These products may be used in both waterbased and oil-based fluids.
- ULTRA SEAL C is a blend of cellulose vegetable fibres and is blended in a medium to coarse grade. The product is coated with a food-grade mineral oil and is compatible with both water-based and oil-based fluids.
- ULTRA SEAL PLUS is a blend of XP and C with additional larger sealing agents. It is used to combat total or massive losses.

FEATURES AND BENEFITS:

- Unique particle size distribution allowing the various grades to be used for a variety of lost circulation types.
- Seals micro-fractures, inhibits seepage loss, seals off low pressure zones and reduces torque.
- May be used in water-based and oil-based fluids as well as cementing applications.

RECOMMENDED TREATMENT: 5-30 kg/m³, depending on application and blend.

PHYSICAL PROPERTIES:

Appearance: Tan granules or powder; mild odour

Specific Gravity: 0.613
Solubility: Insoluble pH: N/A

MIXING/HANDLING:

Mix slowly through conventional jet hopper. May be used in the active system or pumped as pills/sweeps. Refer to the SDS for specific handling requirements.

MICROTOX® THRESHOLD: TBD

PACKAGING: 11.34 kg bag / 48 bags/pallet
